SUMMARY

Front-End Developer who has shipped production features for five live products — a hiring platform, a credit-scoring tool, a fintech wallet app, a learning management system, and a full-stack e-commerce app — across two internships. Built the Job Seeker, Employer, and Blacklist modules for Precheck Hire and the wallet/payment UI for EveryWair. Also identifies and ships solutions to real problems independently, as with LASU Navigator — built to solve a navigation problem at my own university.

SKILLS

React.js · Next.js · JavaScript (ES6+) · HTML5/CSS3 · Bootstrap · Node.js · MongoDB · REST API Integration · Git/GitHub · Postman · Prompt Engineering (applied in development workflow)

PROFESSIONAL EXPERIENCE

All-Tech Systems & Co — Lagos, Nigeria
Front-End Development Intern | *2021 – 2024*

- Rebuilt legacy Bootstrap layouts as React components across multiple internal projects, improving page responsiveness and load consistency.
- Converted design mockups into production HTML/CSS/Bootstrap/React interfaces across several projects, working directly from design files to shipped UI.

Pro-ICE Limited — Remote
Front-End Development Intern | *2024 – Present*

- Delivered the front end for Precheck Hire, a job-matching platform, by building the Job Seeker, Employer, and Blacklist modules in React.js against a Node.js API.
- Built the credit-score UI for Ace by implementing React and Bootstrap components tested against a Node.js API using Postman.
- Shipped payment and wallet-management screens for EveryWair, a Nigerian fintech app, by building real-time wallet-balance UI in React.
- Built the mentor-student dashboard for Project Qualitas (PQ LMS) by implementing progress tracking, gamified badges, and real-time quizzes in React/Bootstrap.

PERSONAL PROJECTS

LASU Navigator

- Identified that LASU's information was scattered across many separate university websites, making it hard for students to find what they needed — built a single hub consolidating those links with plain-language explanations of each one, using React.

E-Commerce App

- Rebuilt as a full-stack application with a MongoDB backend, giving admins the ability to create and delete products in real time; implemented cart state management and live total recalculation on the front end.

DJ Snoow Website

- Built a React portfolio site for a working DJ, featuring a demo-track player and a direct booking/contact form.

Weather App

- Integrated a third-party weather API with async data fetching and error handling for real-time, searchable weather conditions.

Estate Central Mosque Website

- Built a mosque website with a secure admin panel, allowing non-technical staff to update prayer times and announcements without touching code.

EDUCATION

Lagos State University (LASU) — Lagos, Nigeria
Mathematics — Expected 2028 (started 2025)

Muslim Association of Nigeria (M.A.N.) — Lagos, Nigeria
West African Senior School Certificate (WASSCE), 2022
